

Team & Project Details

Project Title: Auto Ticket Classification using FLOW DESIGNER

Team ID: SWTID-2026-8326

Team Size: 5

Team Leader: JONES BENITTO S

Team Member 1: Aravinth

Team Member 2: BALAMURUGAN.D

Team Member 3: Srithar

Team Member 4: M.Vetrivel

Dear Faculty Members,

Greetings from SmartBridge..!!

Please find the **Project Details** shared below. The project resources include:

1. 1. Project Title
2. 2. Project Document – Detailed instructions and requirements for the project
3. 3. Project Reference Video – Step-by-step guidance on how to complete the project

Important Instructions for Students

Please inform all your students to start working on their assigned/selected project immediately and be ready with the required project submissions.

As instructed by the trainers during the Project Development Sessions, students are required to submit the following:

♦ Project Submission Requirements

1. GitHub Repository Link

- The GitHub repository link must be a **Public Repository Link**.
- All project files/documents should be uploaded to GitHub.
- The project should be maintained and submitted **phase-wise** using the following structure:
 1. 1. Brainstorming & Ideation Phase
 2. **2. Requirement Analysis Phase**
 3. **3. Project Design Phase**
 4. **4. Project Planning Phase**
 5. **5. Project Development Phase**
 6. **6. Project Testing Phase**
 7. **7. Project Documentation Phase**
 8. **8. Project Demonstration Phase**

2. Demo Video Link

- Record a complete **project demonstration video**.
- Upload the video to Google Drive.
- Ensure that the Drive link is set to Public/Anyone with the link can view.

- The demo video should include:
 - Screen sharing of the project
 - Student's voice-over/explanation
 - Project Name
 - **Purpose of the Project**
 - **Use/Benefits of the Project**
 - **Project Execution/Working Process**
 - **Final Output**

▲ Important Note Regarding SkillWallet & Team Formation

As informed during the Faculty SkillWallet Orientation, inform your students to not wait for SkillWallet credentials to start the project work.

Students are instructed to:

1. Form their teams physically without waiting for SkillWallet credentials.
2. Team size should be:
 - Minimum: 2 members
 - Standard: 4 members
 - Maximum: 5 members
3. Select one project from the list of projects attached.
4. Go through the Project Document and Reference Video thoroughly.
5. Start working on the selected project immediately.
6. Prepare all project files according to the 8 phases mentioned above.
7. Upload the phase-wise project files into the GitHub repository.
8. Prepare and record the Project Demo Video as per the instructions above.

◆ Once SkillWallet Credentials Are Received

Once students receive their SkillWallet credentials, they should:

- Contact their respective faculty member.
- Inform the faculty about:
 - The project they are working on
 - Their team members
- Faculty members will then form the respective teams in SkillWallet according to the selected project and team members.

SkillWallet Access Update

We sincerely apologize for the delay in providing SkillWallet access.

SkillWallet access is expected to be updated by tomorrow morning. Students are requested to wait for the credentials and, meanwhile, continue working on their projects as instructed above.

Faculty members are requested to communicate these instructions clearly to all students and ensure that students begin their project work without waiting for SkillWallet access.

Thank you for your cooperation and support.

Regards,
Aparna Nelaturi

Section 7: Project Documentation Phase (Team SWTID-2026-2854)

This section outlines the technical and operational documentation for project reference and deployment by Team SWTID-2026-2854.

1. Technical Guides & Developer Setup

- Clone the repository: **git clone <repository-url>**
- Install dependencies: Run **npm install** (or **pip install -r requirements.txt**).
- Configure environment variables using the provided **.env.example** file.
- Start the local server: **npm start** or **python app.py**.

2. API Endpoints Overview

- **POST /api/v1/tickets/classify**: Submits ticket data to the Flow Designer engine for auto-classification.
- **GET /api/v1/tickets/{id}**: Retrieves status and classification metadata for a specific ticket.
- **PUT /api/v1/tickets/{id}/reassign**: Manually overrides the assigned ticket category or routing destination.

3. End-User Operations

- Log in via the single sign-on portal using assigned user credentials.
- Navigate to the Dashboard to review real-time ticket classification metrics.
- Use the Flow Designer portal to modify decision rules or routing workflows as needed.
